Empathy Map Canvas

Audience needs and communication choices

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Target audience

Potential viewers include students, instructors, policy-interested readers and general users who want to compare fuel prices without reading a large raw table.

2. Audience perspective

Canvas area	Working interpretation
Says	“Show me which prices are being compared and for what period.”
Thinks	“Are differences stable, or do they change over time?”
Does	Selects a country, region, fuel type or date range; compares charts and tooltips.
Feels	May feel overwhelmed if charts use inconsistent scales or unexplained abbreviations.

3. Needs

Clear units, a consistent time period, readable titles, transparent ranking rules, accessible filters and concise explanations of what each chart shows.

4. Pain points

Averages can hide variation; rankings can change with filters; a visual association can be mistaken for causation; and missing or inconsistent data can distort comparisons.

5. Design response

Use descriptive titles, show the aggregation method, state the ranking criterion, provide contextual tooltips, and include a limitations section in the report.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
