Customer Journey Map

How a viewer uses the analysis

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Journey overview

Stage	Viewer action	Design support
Discover	Opens the project page	Project title, purpose and short introduction
Orient	Reads the dashboard headings	KPI labels, units and date range
Explore	Uses filters and hover tooltips	Consistent filter behaviour and explanatory tooltips
Compare	Checks regions or selected countries	Aligned measures and explicit ranking rule
Interpret	Reads the story and report	Captions, caveats and summary of observed patterns

2. Potential friction

A viewer may not know whether a value is a mean, what the tax field represents, or why a country appears in a top-three view. Titles and captions should answer those questions directly.

3. Success indicators

A viewer can identify the study period, explain at least one visible trend, identify the measure used for a ranking, and distinguish descriptive association from causal evidence.

4. Improvement loop

Ask a test viewer to complete a short set of tasks, record where they hesitate, and revise labels or filter instructions rather than assuming the dashboard is self-explanatory.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
