Solution Requirements

Functional and non-functional requirements

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Functional requirements

- Import the supplied CSV and inspect field types.
- Calculate and display summary measures for petrol, diesel, LPG and taxation.
- Display time-series views for the fuel-price and Brent crude measures.
- Compare tax percentage by region and selected country-level rankings.
- Provide a dashboard and story that communicate the selected questions.
- Publish the views and connect them to the project presentation page.

2. Non-functional requirements

- Accuracy: aggregation and units must match the dataset and chart definitions.
- Usability: labels, legends, filters and tooltips must be understandable.
- Consistency: report values and chart captions must agree with the published workbook.
- Maintainability: worksheet names and field definitions should be documented.
- Accessibility: avoid relying on colour alone to communicate a distinction.

3. Constraints

The analysis depends on the quality and coverage of the supplied CSV. The published view may also depend on Tableau Public availability and the user's internet connection.

4. Assumptions to verify

Confirm the meaning of tax_percentage, the price units, the date range and any subsidy categories from the dataset documentation or course instructions.

5. Requirement traceability

Requirement	Evidence to attach
Summary measures	KPI worksheet screenshots

Requirement	Evidence to attach
Time trends	Line-chart screenshots
Regional comparison	Tax-by-region worksheet
Country ranking	Top-three or highest-tax country worksheet
Communication	Dashboard, story and website screenshots

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
