Technology Stack

Tools and their roles

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Stack overview

Tool or component	Role in this project
CSV dataset	Stores the supplied observations and fields.
Tableau Desktop / Tableau Public	Data exploration, worksheets, dashboard, story and publication.
HTML/CSS/Bootstrap template	Presents project information and provides the website layout.
GitHub repository	Stores project files and version history, if used as documented.
GitHub Pages	Hosts the static website when configured for deployment.

2. Data handling

Use Tableau's data connection to load the CSV, verify date and numeric types, inspect missing values, and record any transformations. Retain the original source file unchanged.

3. Website integration

A static GitHub Pages site can present HTML/CSS and embed or link to Tableau Public. A Flask application can be used for a separate local or server-hosted implementation, but GitHub Pages itself does not execute a Flask backend.

4. Not assumed

Snowflake, a live API, or a production database is not listed as implemented unless there is direct project evidence.

5. Reproducibility

Document tool versions where available, the source filename, field definitions, workbook publication links and any manual refresh steps.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
