Project Proposal and Proposed Solution

Scope, deliverables and method

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Executive summary

This project presents an interactive overview of global fuel prices and taxation trends across the 2020–2026 period using a supplied CSV dataset and Tableau visual analytics.

2. Motivation

Fuel prices influence transport and household costs. Cross-country and time-based comparisons can help viewers explore how observed prices differ, while keeping the limits of the data visible.

3. Proposed method

- Inspect the dataset structure and field types.
- Prepare and validate fields required for comparison.
- Create summary, distribution, trend, regional and country-level worksheets.
- Combine selected worksheets into a dashboard.
- Create a story that introduces the question, shows trends and closes with comparisons and limitations.
- Publish the workbook and connect it to the project website.

4. Deliverables

A documented data source, Tableau worksheets, dashboard, story, project website, report and presentation/demo materials.

5. Evaluation

Evaluate the work by correctness of measures, clarity of visual design, consistency between report and workbook, successful publication, and ability to explain the findings.

6. Risks and mitigation

Potential risks include unclear field definitions, overinterpretation, broken published links and missing evidence. Mitigate these through data checks, cautious wording, link tests and screenshots.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
