Final Project Report

Report draft aligned with the provided template

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Introduction

The project explores global fuel-price and taxation trends using a multi-country dataset covering the 2020–2026 period. The output is a Tableau-based dashboard and story supported by a project website.

2. Ideation phase

Describe the problem statement, empathy-map observations and brainstorming process. Explain why time trends and country/region comparisons were selected.

3. Requirement analysis

Document the user needs, solution requirements, data-flow diagram and technology stack. Confirm all field definitions against the source data.

4. Project design

Explain problem–solution fit, the proposed solution and architecture. Include a clear flow from CSV data to Tableau worksheets, dashboard, story and website.

5. Project planning and scheduling

Insert the actual work plan, milestone dates, task ownership and completion evidence.

6. Functional and performance testing

Include test cases, actual outcomes, defects found and retest evidence. Do not invent pass results.

7. Results

Insert screenshots of the actual worksheets, dashboard, story and website. For each screenshot, explain the measure, filter context and observed pattern.

8. Advantages and disadvantages

Advantages may include interactive exploration, consolidated views and accessible visual communication. Limitations may include dataset coverage, aggregation effects and lack of causal inference.

9. Conclusion

Summarize what the analysis demonstrates after checking the final workbook. Separate observed patterns from possible explanations.

10. Future scope

Possible extensions include additional economic variables, data refresh automation, more robust validation and user testing.

11. Appendix

Add the source dataset reference, actual Tableau dashboard and story URLs, GitHub repository, live website, and selected source code or configuration where required.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
