# Findings, Limitations and References

Evidence-based interpretation

**Project:** Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

**Study period:** 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

## 1. Findings template

For each major view, write: (a) what is measured, (b) which dates and filters are active, (c) the pattern observed, (d) the exact value or ranking verified in Tableau, and (e) why the result matters.

## 2. Result record

| View | Record before submission |
|---|---|
| Petrol price movement | Add verified start/end values and notable changes. |
| Diesel price movement | Add verified start/end values and notable changes. |
| LPG price movement | Add verified start/end values and notable changes. |
| Brent crude movement | Describe the observed pattern and avoid assuming direct causation. |
| Tax by region | Record the aggregation and regional ordering. |
| Top-three countries | State the metric, period, filters and verified order. |

## 3. Limitations

Country averages can conceal within-country variation. The dataset may not include exchange rates, logistics costs, local regulation or other variables. Tax and price patterns alone do not prove causality.

## 4. References to complete

Cite the actual dataset provider or course-provided source; Tableau documentation used; website/template source where relevant; and any external source used to interpret economic context.

## 5. Integrity note

Do not present illustrative placeholders as findings. Remove rows that are not relevant and replace them with verified analysis.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
