Communication and Demonstration

Explaining the project to an audience

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Audience and message

The demonstration should help an instructor or viewer understand the problem, the dataset, the analytical choices, the published views and the limitations.

2. Suggested structure

Segment	Content	Suggested emphasis
Introduction	Project title and objective	What question is being explored?
Dataset	Fields and study period	What data is available?
Worksheets	Summary, trend and comparison views	How does each view answer a question?
Dashboard	Filters and layout	How can the viewer explore the results?
Story	Narrative sequence	What is the logical progression?
Website	Published view and project links	How can the result be accessed?
Conclusion	Main verified observations and limitations	What can and cannot be concluded?

3. Speaking guidance

Use short sentences, define the units, and explain why each chart was selected. Do not read every tooltip aloud or claim that a visual relationship proves cause and effect.

4. Demo readiness

Open the dashboard and story links before recording, check the internet connection, close unrelated tabs and prepare a backup screenshot in case a public view loads slowly.

5. Evidence

Save the final recording link and screenshots only after confirming that they show the submitted version.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
