Project Demo Planning

Run sheet, setup and contingency

Project: Global Fuel Prices and Taxation Trends: A Comprehensive Analysis

Study period: 2020–2026 **Primary tool:** Tableau Public **Data source:** supplied global fuel-price CSV dataset

1. Before the demo

- Confirm dashboard, story, repository and website links.
- Open the published views and check that the current version appears.
- Check screen resolution, browser zoom and internet connection.
- Prepare the dataset description and the key chart explanations.
- Keep a backup of the screenshots and a short spoken outline.

2. Run sheet

Step	Action	Evidence/transition
1	Introduce the project	Title and objective
2	Describe the dataset	Field list and study period
3	Show KPI and distribution worksheets	Explain measure and unit
4	Show trend worksheets	Discuss verified patterns
5	Show regional and country comparisons	State aggregation/ranking rule
6	Open dashboard and story	Demonstrate navigation
7	Open project website	Show access route
8	Conclude	Summarize results and limitations

3. Contingency plan

If Tableau Public is slow, show the saved screenshots and explain that the interactive view is published online. If a filter behaves unexpectedly, reset it and repeat the step rather than hiding the issue.

4. After the demo

Verify that the recording is saved, the share permission works, and the submitted links open from a signed-out or private browser session.

Prepared as a project-documentation draft. Replace illustrative wording with verified results, actual screenshots, and the student's own decisions before submission.
